AVON LAKE, OHIO (May 18, 3:35 p.m. ET) -- PolyOne Corp. has linked with Riverdale Color Co. and Clearfield Color LLC to supply a new liquid color system for plastics processors that officials said can reduce operating costs and improve workplace safety.

The two-part system is OnColor Complete Liquid Color Solutions. It combines technology from Riverdale and Clearfield with liquid colorants and refillable containers from Avon Lake, Ohio-based PolyOne.

In a May 17 news release, officials described the system as "a unique returnable polymer delivery system" that can minimize inventory and capital investments. Paul Maguire — president of both Perth Amboy, N.J.-based Riverdale and Aston, Pa.-based Clearfield — described the system as "the first truly robust closed-loop system that is both practical and environmentally sound."

PolyOne global color and additives president John Van Hulle said that the agreement with Riverdale and Clearfield "underscores PolyOne's commitment to specialized solutions that provide real economic benefit to our customers' bottom line."

PolyOne ranks as North America's largest compounder and one of the region's largest resin distributors. Both Riverdale and Clearfield are owned by Maguire Products Inc. of Aston, a leading supplier of liquid color pumps and other auxiliary equipment.
